

A modern approach: Sitecore with Netlify & Uniform

Focus on creating great digital experiences, not on infrastructure

- 1 Continue to **manage your content** and personalization in Sitecore
- 2 **Uniform hooks into Sitecore**, gathering content and logic for personalization
- 3 **Netlify builds and deploys each Sitecore site** to the Netlify Edge network. Sites are cached & pre-rendered so they **load instantly** on the users device.
- 4 For personalization and tracking, **Uniform pre-renders personalization logic** at the network edge so that personalization is **significantly faster**.
- 5 **Behavior data is sent** back to xDB or external analytics through Uniform
